

BaspeConsola without its companion software, BaspeTimer

Activation and deactivation of your networked workstations is not available in this configuration. Computer with BaspeConsola acts as an point of sale machine controlling its own time usage with no interaction with the other networked machines.

BaspeConsola with is companion software BaspeTimer

BaspeConsola's usefulness increases, since all the workstations with BaspeTimer are deactivated and display their current status in ScreenSaver mode (increasing the life of each monitor.) When a workstation is rented the BaspeConsola automatically activates that computer and displays an information window, allowing the client to constantly monitor their use of the machine.

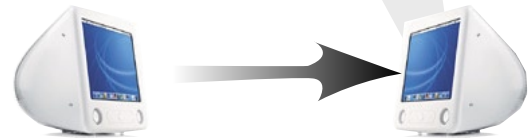

The Consola doesn't have a limit on the number of computers it can control, but each computer must have a fixed IP address. You can include computers outside your network as long as they are connected with a valid IP Address (accredited or not, as long as you are connected.)

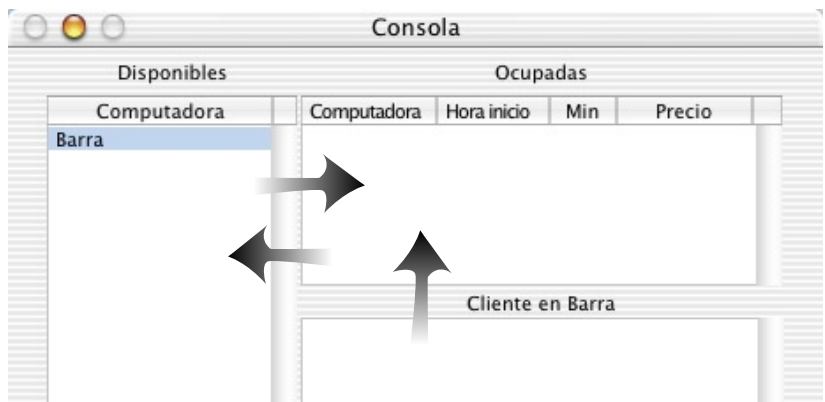

Baspe Café

Control your business

- Cyber Cafes
- Internet Cafes
- Access Point Areas
- Telecenters
- Comunity centers

You can send messages and activate and deactivate¹!

Easy to use because the interface is completely Drag & Drop! Anyone can learn to use in less than 20 minutes²!

Download at www.baspe.com

Don't worry, the BaspeConsola point of sale feature can handle all your current and future sales needs.

Concepto		Unidad	Precio	Cant.	Total
Hoja Bond Blanco gruesa		pza	0.5	001	0.5
Hoja Fotografica		pza	5	001	5

Area de Servicio	Descripción	Unidad	Precio	Exist
Renta	Hoja bond blanco ligera	pza	0.5	100
Papeleria	Hoja Bond Blanco gruesa	pza	0.5	100
Consumible	Hoja Fotografica	pza	5	100

Security

We understand that you like to maintain control of your business, BaspeConsola records all of its daily activity, as well as, the activity of each workstation with BaspeTimer installed.

BaspeTimer

Both BaspeConsola and BaspeTimer are easy to configure.

BaspeTimer

BaspeTimer's main function is to deactivate the workstation when not in use. When the workstation is rented, BaspeTimer controls the timed use of the computer (independent of the control of BaspeConsola.) The interface is very simple and accommodates time alerts and customized text messages.

Everything that occurs while BaspeTimer is running is recorded in the data base so that you will always know what happens in your business, even when you are away... (or you just don't know what happened!)⁴

Software installation requirements:

BaspeConsola

Apple Macintosh computer:

Mac OS 10.1 or higher, 5 Mb of available RAM, 8 Mb of hard disk space (operating hard disk requirements depend on daily usage) keyboard, mouse, recommend regular data back-up, (local or ftp.)

PC compatible computer*

Windows 98 or higher, 128 Mb RAM, 5 Mb of hard disk space (operating hard disk requirements depend on daily usage) keyboard, mouse, recommend regular data back-up, (local or ftp.)

* Not available with BaspeTimer

BaspeTimer

Apple Macintosh computer

Mac OS 10.1 or higher, 2 Mb of available RAM, 4 Mb of hard disk space (operating hard disk requirements depend on daily usage) keyboard, mouse, recommend regular data back-up, (local or ftp.) a managed user account configured to the individual needs of your business.

(1) Requires installation of BaspeConsola on the primary computer and BaspeTimer on each monitored workstation. BaspeConsola is activated to control the number of stations stated in your end user license.

(2) Requires understanding of the use of a mouse and the Drag & Drop concept.

(4) Management control of the administrative access to BaspeConsola and each workstation with BaspeTimer is fundamental to the security of the system and will always need to be complemented by safety measures taken at the Operating System level for the User Account of each individual workstation.

(5) Control the time and consumptions charged to client, the access policy to wireless network and activation are responsibility of access point owner.
